

**POLAR-LUBE  
BLUE  
AIR TOOL ANTIFREEZE LUBRICANT  
MINUS -60° F**

POLAR-LUBE is a state of the art, airline antifreeze that will **protect against freezing down to -60° F (-50° C)**. Ideal for all outdoor airlines, air tools, air hoists, valves, automatic door cylinders on buildings and transportation vehicles.

Air tools and valves will begin to freeze at +40° F, because of the related pressure drop on the exhaust. This is why -60° F is an absolute requirement.

POLAR-LUBE **instantly absorbs the moisture**, in the airline, holding it in suspension, to prevent freeze-ups. Frozen tools can also be unfrozen by adding POLAR-LUBE to the inlet.

Ideal for: **Military, industrial, mills, mines, construction, oil rig & shipbuilding, pipeline, forestry, transportation, winter recreation areas, and petrochemical.**

**It is compatible with all manufacturers lubricators**, including those with new polycarbonate and nylon sight glass components. Many anti-freeze products on the industrial market do not meet these standards. It is always good industrial practice to have safety bowl coverings on all filters and lubricators in pressurized applications.

Instant demo: Put about 250 ml of POLAR-LUBE in a clear drinking glass and take to a tap. Add water and note it will continue to immediately absorb the water.

Specifications:

Blue Liquid

Viscosity cST@ 40°C 10

Boiling Point 188°C

Specific Gravity 1.038

pH Neutral

*Available Sizes: 12 x 1L Case, 4 x 4L Case & 205L Drum*
